# AHMED OUNISSI

Dallas, TX | (214) 531-8846 | ounissi.a.career@gmail.com | U.S. Citizen

## PROFESSIONAL SUMMARY

Software engineering student specializing in AI automation, intelligent workflows, and backend integrations. Co-founded and built Pulpoid, an AI-powered automation system combining LLMs, APIs, and workflow orchestration to run multi-step processes with no manual intervention. Comfortable across the stack: Python, JavaScript, and SQL for logic and data, n8n and Make.com for orchestration, and RAG/prompt design for the AI layer. Background also includes enterprise IT support and full-stack development.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, SQL, HTML, CSS

**AI & Automation:** LLMs, RAG, AI Agents, Prompt Engineering, n8n, Make.com, Zapier, Relevance AI, Retell AI

**Backend & Integration:** REST APIs, Webhooks, Node.js, Supabase

**Development & Data:** React, Git, API Integration, Workflow Design, Airtable, Excel, Tableau

## PROJECTS

**Pulpoid — Co-Founder***Mar 2025 – Aug 2025*

- Designed and built AI-powered automation systems integrating APIs, LLMs, databases, and n8n/Make.com workflow orchestration
- Built a RAG-based assistant combining retrieval and LLM generation for context-aware responses; integrated Relevance AI, Retell AI, Telegram, Supabase, and Airtable
- Implemented reliability features (validation, retries, fallbacks, error handling) and documented system architecture

**Multi-Agent AI Automation System (Super Agent Team)***Client Engagement*

- Built a 20-agent, 50+ tool orchestration system (Relevance AI + Make.com + Unipile) letting one natural-language request trigger multi-step workflows across messaging, CRM, research, content, and scheduling tools
- Designed a manager/director agent hierarchy with narrow per-agent tool scopes and multi-level output evaluation to keep large tool counts reliable
- Built example workflows (unread-communications digest, LinkedIn lead research to CRM, content publishing pipeline) to validate cross-agent handoffs and reliability under real multi-step tasks

**AI-Powered Real Estate Acquisition System***Client Engagement*

- Built an end-to-end agentic pipeline (n8n, Supabase, OpenAI, Retell AI) that ingested and qualified property leads, generated offers, and placed AI voice calls to homeowners
- Combined deterministic JS calculations with LLM reasoning and RAG, feeding call transcripts back into the knowledge base to improve future calls
- Added retry logic and duplicate-prevention safeguards for production reliability, and an event-driven trigger (new Google Drive file) to kick off the pipeline automatically

## EXPERIENCE

**TD — Information Technology Support Specialist***Ottawa, ON | Nov 2023 – Aug 2024*

- Provided technical support for hardware, software, network, and account-access issues in an enterprise banking environment
- Diagnosed authentication and configuration issues, guided users through resolutions, and escalated complex incidents per security procedures

**SurveyMonkey — Software Engineer Intern***Ottawa, ON | Apr 2023 – Jul 2023*

- Developed and maintained software features in Python and JavaScript, including scripts to automate data-processing tasks
- Worked with REST APIs and backend services; used Git in an Agile team environment

**Pont Roulant Servi-Tech — Full-Stack Web Developer Intern***Blainville, QC | Jan 2023 – Apr 2023*

- Designed and developed a company website using React, Node.js, JavaScript, HTML, CSS, and SQL, translating business requirements into user-facing features

## EDUCATION & CERTIFICATIONS

**B.S. Software Engineering —** American University of Malta (Expected Jan 2027) | **Diploma, Computer Programming —** Algonquin College

**Certifications:** IBM AI Fundamentals, IBM Data Fundamentals, IBM Getting Started with AI, PMI Agile Project Management

**Languages:** English, French, Spanish, Arabic
